Academic Qualifications

M.Tech (CSE), NIT Bhopal — CGPA: 8.3/10 (2025–2027)
B.Tech (CSE), G.B. Pant Govt. Engineering College — CGPA: 8.25/10 (2021–2025)

Technical Skills

- **Languages:** Java, Python, JavaScript (ES6+), TypeScript, SQL
- **Backend Development:** Node.js (Express), FastAPI, REST APIs, WebSockets (Socket.IO), Microservices
- **Frontend:** React.js, HTML5, CSS3, Tailwind CSS
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Cloud & DevOps:** Docker, Git, CI/CD, Linux, GitHub Actions
- **ML & AI:** LSTM Forecasting, Gemini/OpenAI APIs, TensorFlow, RAG Pipelines, FAISS
- **CS Fundamentals:** Data Structures & Algorithms, OOP, SOLID & DRY Principles, OS, Computer Networks

Work experience

Philips | Software Engineering Intern *Aug'26 - Present*

- Diagnosed a data-integrity bug in a service-entitlement pipeline caused by flawed join and status-matching logic; rewrote the logic and validated the fix via **SQL** regression testing, recovering **4,500+** misclassified records and eliminating **450K+** spurious join matches.
- Resolved a broken **AWS Elastic Beanstalk** deployment pipeline by fixing **CI/CD** configuration failures, correcting missing environment variables and secrets, and resolving **IAM** permission gaps blocking deploys, restoring reliable automated releases.

Curiate Solutions | SDE Intern (Remote) *Oct'25 - Dec'25*

- Built a guest checkout flow for Skaya.club using **React** and **Razorpay**; integrated **cron jobs** for abandoned cart recovery, cutting cart abandonment by **35%** and recovering lost purchase completions directly.
- Built an automated **WhatsApp chatbot** for Skaya.club using **WATI** and **Voiceflow**; integrated trip search and booking workflows via **MCP**, enabling users to query trips by date, price range, destination, and host directly in chat. Remodelled existing REST APIs to return chatbot-compatible structured responses for trip details and itinerary plans, enabling end-to-end booking without human intervention.
- Engineered a **Headless CMS** pipeline via the **Notion API** for an interior design platform, fetching and rendering blog content at request time so non-technical teams could publish SEO-ready posts without triggering code deployments.

Center for Development of Telematics | 6M SDE Intern *Jan'25 - Jul'25*

- Built the **CAT** (Configuration Automation Tool) in **Python (FastAPI, Pandas)** to generate 4G node `.cfg` files programmatically, cutting configuration time by **60%** and deployment errors by **30%**.
- Developed the **DPS** (Deployment Planning Software) using the **MERN Stack**to track node versioning and parameter dependencies; automated validated configuration pushes to the **TCS** central repository, making it the authoritative source for all production deployments.
- Devised a multi-tier rollback workflow that let field teams flag errors to 4G engineers and revert base configurations to the networking team; compressing issue resolution time during critical node updates.

Grid Controller of India Ltd. | Intern *Aug'24 - Nov'24*

- Developed a national-scale load-forecasting pipeline using **ANNs** with **LSTM** layers, ingesting telemetry from **615+ weather stations**; engineered 8 features from high-dimensional inputs, achieving **2**× higher accuracy over the legacy model.
- Formulated Day-Ahead and intraday **R1 (Revised)** prediction workflows, giving grid operators precise consumption forecasts to optimise resource allocation and adjust for intraday demand shifts.

Key Projects *Visit My Portfolio for more projects*

Distributed Task Queue | *Distributed Systems Project* *May'26*

- Constructed a distributed task queue system using **Celery, RabbitMQ, and FastAPI,** supporting **concurrent multi-worker** job execution with **Redis** as the result backend. Implemented for **autoscaling environments** where long-running tasks are offloaded as background jobs. Fully containerised with **Docker Compose.**

TechBossAI | *AI-Powered Developer Agent* *Apr'26*

- Shipped TechBoss, a VS Code extension with a **multi-turn Gemini agent loop** that autonomously navigates codebases via **tool-calling (workspace index + file retrieval)**, generates context-aware edits within a **dynamic token budget**, and surfaces changes through a one-click diff interface for safe acceptance or rollback.

NovaTrade | *Event-Driven Trading Platform* *Feb'26*

- Architected a low-latency crypto paper-trading platform using event-driven microservices architecture; implemented Redis Pub/Sub for async order execution achieving sub-50ms order routing, WebSocket-based live P&L updates, and full Binance Testnet API integration. Designed for horizontal scalability with isolated order, market-data, and notification services.
